## Skills

- HTML5 90%
- CSS3 75%
- JS 35%
- BOOTSTRAP 50%
- SASS 50%
- PHOTOSHOP 20%
- CMS 35%
- GIT 30%
- REACT 25%

My theoretical knowledge and practical experience consists of several years of working as a content manager at AWEB Systems and part-timing as a frontend developer at one US-based financial company.

My basic job duties are about creating and fixing web pages, migrating sites to the adaptive layout. While working with those projects I got experience with various CMS (like WordPress, Joomla!, Bitrix, Drupal, Wix, etc.) and also have a basic experience of working with existing Angular project.

My passion is to make the page structure clear and fancy from both code and visual parts. I like when things work right: I am interested in making things better in my everyday life and work. I'm constantly improving my knowledge with courses and self-study.

## Work experience

### 2018-NOWADAYS, part-time job, real estate and repair consultant

I consult people in technical design and renovation, helping with finding apartments to buy. Fully supporting projects from the selection of the apartment to the placement furniture and appliances in it. I develop a preliminary technical design for the customer needs with the output of all communications and furniture installation. I help with apartment repairs, selection and purchase of materials. Help with finding and buying furniture, appliances; compile and arranging them in the apartment.

### 2018-2020, part-time job, Frontend developer (HTML-coder)

I was doing assistance on an Angular based financial web

project. It is related to analysis and aggregating financial data for the mortgage industry.

My duties there were related to improving the multiple pages layout. It basically consists of various tables and modals with a lot of data that needs to be presented clearly and adaptively.

The solution should look similar across multiple browsers.

The main technologies are flex boxes, grids, bootstrap, floats, sass and devtools.

### **2015-2017 Aweb systems, content-manager**

I had a pool of projects with the flow of daily tasks that includes: fixing layout, creating the adaptive layout, adding/fixing content, migrating entire sites from one CMS to another, creating landings, adding scripts to web pages (like maps, JivoSite, external jquery, etc..), adding complex elements (slider, accordions, tabs).

### **2012-2014 “Institute of Magnetism of the National Academy of Sciences of Ukraine and the Ministry of Education and Science of Youth and Sports of Ukraine”, engineer**
